                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New composition comprising a fragment of a glucan binding protein-B (dpbB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                           361 SAAAAGYRVGSTPSAGAVAVWNDGGYGHVAYVTGVQGGQIQVQEANYAGNQSIGNYRGWF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MKKRILSAVLVSGVTLSSATTLSAVKADDFDAQIASQDSKINNLTAQQQAAQAQVNTIQG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           301 DQESTTATEAQPSASSASTAAVAANTSSANTYPAGQCTWGVKSLAPWVGNYWGNGGQWAA 360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        protein-B (GDpB) of Streptococcus mutans strain SK32. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The includes a number of muman leucocyte antigen (HLA)-binding pitopes. The caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GDpB peptides, especially HLA-binding peptides, cowpositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispicopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GDpB can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TIAQNTNALNTQQAQLEAAQLNLQAELTTAQDQKATLVAQKAAAEEAARQAAAQAAABA

The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multipolicopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Glucan binding protein-B; GbpB; vaccine; anticaries; epitope; immunogen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                      The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                           9

```
the present invention relaters to a computational metron (ML) for deartifying adhesin and adhesin-like proteins, by computing the sequencemental network software, training an artificial neural network (ANN) for each of the computed five attributes, and identifying the adhesin and adhesin-like proteins, as as to f 274 annotated genes (equal or greater than 0.51. Also claimed is a set of 274 annotated genes encoding adhesin and adhesin-like proteins, having 274 fully defined 162-1151 base pair (SEQ ID NO: 385-658) sequences; a set of 105 hypothetical cenceding adhesin and adhesin-like proteins, having 105 fully defined 162-1151 base pair (SEQ ID NO: 385-658) sequences; a set of 279 annotated adhesin and adhesin-like proteins, having 105 fully defined 53-3716 base corrected and adhesin-like proteins, having 279 fully defined 53-3716 base corrected adhesin and adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like proteins, of therapeutic potential for identifying adhesin and adhesin-like proteins of therapeutic potential. And identifying adhesin formulations cuseful for identifying putative adhesins that are important in drug discovery and preventing therapeutics for whooping cough, pneumonia, cuseful for identifying putative adhesins that are important in drug dastring and preventing therapeutics for whooping cough, pneumonia, cusper and urinary tract infections. (MI) is active adhesin active of distantly related organisms, and from bacteria belonging to a wide cuspulation and proteins. The present sequence is a microbial pathesin adhesin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The includes a number of compositions and vaccines for dental caries. The compositions compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multipeptiopic polypeptides can be prepared synthetically or by recombinant DNA technology, Antibodies raised against MHC class II binding fragments of GbpB can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.

                                                                                                                                      binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to Streptococcus mutans GbpB protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   420
                                                                                                                                                                              The present sequence is the protein sequence of the glucan binding protein-B (GDpB) of Streptococcus mutans strain 157P2. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GDpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multiapitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GDpB can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   09
Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 MKKRILSAVLVSGVTLSSATTLSAVKADDFDAQIASQDSKINNLTAQQQAAQAQVNTIQG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         KAAAEAKALOEQAAQAQAAANNNNTQATDASDQQAAAADNTQAAQTGDSTDQSAAQAVNN 300
                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammala against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                       New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the protein sequence of the glucan binding protein. B (GbpB) of Streptococcus mutans strain 3NN1. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.

```
the invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN6604-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by pyrogenes. Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used to detect streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity contours and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         OVSALOTOGABLOABNORLBAQSATLGQQIQTLSSKIVARNESLKQQARSAQKSNAATSY 120

vector; a hyperimmune serum reactive antigen compitaing a sequence encoded by the nucleic acid molecule and consisting of e.g., 85, 299, 467 consisting of peptides comprising e.g., 76, 134, 21 or 576 amino acids; crasquents of hyperimmune serum reactive antigens a process for producing a cell that expresses a S. agalactiae hyperimmune serum reactive antigen; a process for producing a cell that expresses a S. agalactiae hyperimmune serum reactive antigen; a pharmaceutical composition, especially a vaccine, comprising the hyperimmune serum composition, especially a vaccine, comprising the hyperimmune serum reactive antigen; a mutabody that binds at least to a selective part of the hyperimmune serum reactive part of the hyperimmune serum reactive antigen; a mutagonist that binds to the hyperimmune serum-reactive antigen; a method for identifying an antagonist capable of binding to the hyperimmune serum-reactive antigen; a method for identifying an antagonist capable of reducing or inhibiting the interaction activity of a process for in vitro diagnosing of inhibiting the interaction activity of a process for in vitro diagnosing a disease related to expression of the hyperimmune serum-reactive antigen; and a process for in vitro diagnosing of sease related to in vitro diagnosing of sease related to in vitro diagnosing of sease related to in vitro diagnosing and sease related to in vitro diagnosing and sease related to invitro diagnosing of sease related to invitro diagnosing and sease related to invitro diagnosing and for identifying an interaction partner of the hyperimmune serum reactive antigen; where the peptide completes antigen; where the peptide completes antigen; and sease where the peptide completes antigen; and sease where the peptide completes antigen; and sease where the peptide completes antigen; and sease where the peptide completes antigen; and sease where the peptide completes antigen; and sease where the peptide completes antigen; and sease where the peptide completes antigen; and sease where the pe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes an isolated nucleic acid molecule encoding a hyperimmune serum reactive antigen or its fragment. Also described are: a vector comprising the nucleic acid molecule; a host cell comprising the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              INAIINSKSVSDAINRVSAIREVVSANEKMLQQQEQDKAAVEQKQQENQAAINTVAANQE 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       for the manufacture of a vaccine against S. agalactiae infection. This is the amino acid sequence of a Streptococcus agalactiae hyperimmune serum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 QVSALQTQQAELQAENQRLEAQSATLGQQIQTLSSKIVARNESLKQQARSAQKSNAATSY 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   tional nucleic acid comprising aptamers or spiegelmers. The nucleic molecule is useful for the manufacture of a functional ribonucleic comprising ribosymes, antisense nucleic acids or siRNA. The nucleic molecule, hyperimmune serum-reactive antigen or antibody is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid molecule encoding a hyperimmune serum reactive antigen, useful for the manufacture of a vaccine against Streptococcus agalactiae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MKKRILSAVLVSGVTLSSATTLSAVKADDFDAQIASQDSKINNLTAQQQAAQAQVNTIQG

The nucleotide sequences encode polypeptides of Sagalactiae involved in the synthesis of amino acids, cell membranes, intermediate (central) metabolism, energetic metabolism, fatty acid and phospholipid metabolism, nucleotide metabolism including purines, pyrimidines and/or nucleosides, regulatory functions, replication, translation, protein transport, adaptation to atypical conditions, sensitivity to medicines and/or analoques, functions related to transposons, biosynthesis of cofactors, prosthetic groups and transporters, cell membrane proteins and cellular machinery. (I) are befuefic on add/or amplification of nucleic acids. Pharmaceutical composition comprising (I) or (II) are useful for treatment of a bacterial S. agalactiae infection. Note: WO200292818A2 is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           chips
                               Genomic nucleotide sequences encoding polypeptides of Streptococcus agalactiae for the development of vaccines, diagnostic tools, DNA cland identification of therapeutic targets.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   L;
